What is the Limbo Casino Game?

Limbo is an instant-win casino game popularized largely by crypto-focused online casinos. Motivated by the "Crash" mechanic, Limbo eliminates the rising rocket or line graph, changing it with a single, immediate outcome.

When a player **limbo crypto game** opens a Limbo game, they are provided with 2 primary inputs:

1. **The Bet Amount:** How much money they want to bet on the round.
2. **The Target Multiplier:** The particular multiplier they hope the game will strike or surpass (e.g., 2x, 10x, 100x, or even 1,000,000 x).

When the gamer clicks the "Bet" or "Roll" button, the game instantly generates a random number. If the generated number is **higher than or equivalent to** the target multiplier, the gamer wins. If it falls below, the bet is lost.

How the Game Mechanics Work

At its core, Limbo is a game of probability. Unlike slots, where signs dictate wins, Limbo relies completely on math and likelihood percentages.

When a gamer sets a target multiplier, the game immediately computes 2 crucial metrics:

- **Win Chance:** The mathematical likelihood of striking that particular multiplier.
- **Payment:** The overall return if the target is reached (Bet £ \ times £ Target Multiplier).

Example of Limbo Mechanics

To understand how target multipliers affect gameplay, think about the following standard setup (which generally consists of a 1% house edge):

Target Multiplier Win Chance (%) Potential Payout on £ 10 Bet **1.10 x** 90.90% £ 11.00 **2.00 x** 50.00% £ 20.00 **5.00 x** 20.00% £ 50.00 **10.00 x** 10.00% £ 100.00 **50.00 x** 2.00% £ 500.00 **100.00 x** 1.00% £ 1,000.00 **1,000.00 x** 0.10% £ 10,000.00

As revealed in the table, as the prospective payment increases, the win chance decreases proportionally.
