Windows and Killer Utility Bills

Does your utility bill leave you in tears? Does your family walk around wearing all their clothes so you can avoid cranking up the heater and wiping out your bank account? Those beautiful windows are killing you. Hate Paying Taxes?Do you hate paying taxes? ***K&K Vent Cleaning*** Everyone does. At least you only have to do it once a year. If you dont take steps to improve your energy use, however, you are paying the utility company an energy waster tax every month and every year. I bet you never thought of it that way before. Fortunately, you dont need an accountant to eliminate this tax. To terminate your energy waster tax, you need to understand the areas where you are probably wasting energy. Here is the biggest offender. Windows are necessary items in a home. Can you imagine a home without them? Of course not. Still, that beautiful view to the world outside comes with a heavy price. Windows are the single biggest area where heating or cooling efforts are wasted. Because windows open and close, they almost always develop leaks where your hard earned money escapes in the form of heat transfer. If you do nothing else after reading this article, take a close look at your windows. Making them air tight could save you as much as forty percent on your utility bill. Even if your windows **K&K Air Duct & Dryer Vent Cleaning** are not leaking, you still have a problem. As people living in cold climates can attest, most installed window are horrific burdens on heating efforts. These year around windows tend to be thin and are not designed for specific conditions. Put in simple terms, heat moves through them like beads at Mardi Gras. If you dont believe me, go stand next to one of your windows on a winter day. It gets a bit chilly, eh? To overcome your inferior window problem, you have two options. The first is to install windows designed to hold in hot air during winter. This will save you a ton of money, but you have to change them twice a year, installation and removal. If your lazy like me, a second option is to go with Energy Star windows. Energy Star is a government program designed to encourage manufacturers to build better stuff for your home. If a product has an energy star sticker, it means it is going to save you cash on your utility bill. Since windows are problematic, the government has focused on them and you can now buy Energy Star windows at all home improvement stores. Note that I didnt name an improvement store, but am willing to amend this article for a significant sponsorship fee! While I wait for Home Depot or Lowes to call, go take a look at your windows. If you concentrate really hard, you can see dollar bills floating through them.
