Hot New Towel Warmers

The origins of cast iron water heated towel warmers referred to as radiators, dates back to the 1920s, but were quickly phased out during the Depression era and when the economy eventually picked up never made a strong comeback until recently. When the mid 90s approached, homeowners began incorporating new technologically advanced towel warmers into their bathroom remodeling projects due to the warm luxurious nature both electric and water heated towels rails bring about in todays bathrooms. The feeling of wrapping yourself in a warm toasty towel after stepping out of a bath or shower provides a soothing sensation rather than a cold damp just used towel.With the reintroduction of the heated towel warmer spawned a vast selection of styles and finishes not only for the bathroom, but are now being installed in bedrooms, mudrooms and basements for added heat and as a way to reduce moisture and mildew. Hydronic heated towel warmer models use hot water from either your domestic hot water heater or hydronic system which requires the use of a circulating pump in order to warm the towel rails. Electric self-contained rail warmers are oil filled, once plugged it the oil begins heating and since they have low wattage heating elements they are a safe and economical way of bringing warmth to any room. The beauty of these paneled radiators whether electric or hydronic are great for those chilling winter months for warming blankets and drying wet winter clothing.
