## What is the Limbo Casino Game?

At its core, Limbo is a specialized form of a crash game. Promoted largely by crypto-focused online gambling establishments, the game takes motivation from the classic limbo dance concept: *how low (or in this case, how high) can you go?*

Unlike conventional casino video games where gamers position bets and wait on cards to be dealt or reels to stop, Limbo operates on a single variable set by the user: **the target multiplier**.

The player sets a wanted payment multiplier (e.g., 2x, 10x, or even 1,000 x), puts a wager, and strikes the "Bet" button. The game's algorithm then produces a random multiplier. If the generated multiplier amounts to or higher than the gamer's target multiplier, the bet wins. If it fails, the bet is lost.

### Key Characteristics of Limbo:

- **Minimalist Interface:** Usually featuring simply a few input boxes and a huge multiplier readout.
- **High Multiplier Potential:** Players can typically target multipliers varying from a modest 1.01 x to an astronomical 1,000,000 x.
- **Provably Fair:** Most versions of Limbo utilize cryptographic hashing, permitting gamers to separately validate the fairness of every single round.

4. **Start the Round:** Clicking "Bet" triggers the random number generator (RNG).
5. **The Result:** The system reveals the generated multiplier. If it meets or surpasses the target, the player wins their stake increased by their target.
