The Mathematics of Rock Paper Scissors

Research studies on human behavior show a distinct pattern after the result of a single round:

- **If a player wins**, they tend to toss the *same* check in the next round.
- **If a gamer loses**, they tend to move to the indication that would have beaten what their opponent simply threw.

Example: If Player A wins using **Rock**, expect them to toss **Rock** again in the next round. To counter this, Player B need to toss **Paper**.

2. The First-Round Bias

In a fresh match or a single-elimination wager, data reveal that **Rock** is statistically the most typical opening throw. This is mostly because the word "Rock" belongs to the game's title, making it mentally prominent. Throwing **Paper** on the very first round is often a statistically sound opening gambit.

3. Verbal Priming

In live or chat-enabled digital environments, opponents often try to affect each other's subconscious. If a player casually states, "*I'm absolutely going to throw Rock this time,*" their opponent will likely select Paper. Nevertheless, advanced players know this is often a double-bluff, leading them to toss Scissors instead.
