What is the Limbo Casino Game?

Limbo is an instant-win casino *Bitz limbo* game promoted largely by crypto-focused online gambling establishments. Motivated by the "Crash" mechanic, Limbo removes the rising rocket or line graph, replacing it with a single, immediate result.

When a gamer opens a Limbo game, they exist with 2 primary inputs:

1. **The Bet Amount:** How much money they wish to bet on the round.
2. **The Target Multiplier:** The particular multiplier they hope the game will hit or go beyond (e.g., 2x, 10x, 100x, or perhaps 1,000,000 x).

When the player clicks the "Bet" or "Roll" button, the game quickly creates a random number. If the produced number is **higher than or equal to** the target multiplier, the player wins. If it falls below, the bet is lost.

How the Game Mechanics Work

At its core, Limbo is a game of probability. Unlike slots, where signs determine wins, Limbo relies totally on mathematics and likelihood portions.

When a gamer sets a target multiplier, the game instantly determines two important metrics:

- **Win Chance:** The mathematical probability of hitting that particular multiplier.
- **Payment:** The overall return if the target is reached (Bet £ \ times £ Target Multiplier).

Example of Limbo Mechanics

To understand how target multipliers affect gameplay, think about the list below basic setup (which generally consists of a 1% house edge):

Target Multiplier	Win Chance (%)	Potential Payout on £ 10 Bet
1.10 x	90.90%	£ 11.00
2.00 x	50.00%	£ 20.00
5.00 x	20.00%	£ 50.00
10.00 x	10.00%	£ 100.00
50.00 x	2.00%	£ 500.00
100.00 x	1.00%	£ 1,000.00
1,000.00 x	0.10%	£ 10,000.00

As revealed in the table, as the possible payment boosts, the win opportunity decreases proportionally.
