Rather of casting a line into a quiet lake to capture fish for standard slot payments, the angler casts his net into the water, and players view as his catch worth-- and the associated multiplier-- increases 2nd by second.

The main objective is simple: **squander before the net breaks (the crash)**. If a player squanders successfully, they win their stake increased by the current worth on the screen. If the net breaks before they struck the cash-out button, the stake is lost.

2. **The Cast:** Once the wagering window closes, the fisherman casts his web, and the multiplier begins at 1.00 x.
3. **The Climb:** As the animation plays, the multiplier gradually increases. It can stop anywhere from a low 1.00 x (an instant crash) to massive heights, restricted only by the video game's optimum win cap.
4. **The Cash Out:** Players should hit the "Cash Out" button before the crash occurs.
5. **The Crash:** At an arbitrarily created point identified by a Provably Fair algorithm, the net stops working or the fish escape, ending the round.
