What is the Towers Game?

At its core, the Towers game is a vertical development game motivated by the traditional idea of climbing a structure while preventing hidden threats. Players are presented with a grid-- typically represented as a series of rows and columns-- forming a tower.

The main goal is easy: **pick a tile in each row to climb higher.**

- Each successful step up increases the multiplier, consequently increasing possible earnings.
- Selecting the incorrect tile activates a "loss" (often symbolized by a trap, a gargoyle, or a collapsing block), resulting in the forfeiture of the current round's stake.

The beauty of the game lies in its versatility. Players can pick to squander at any time, locking in their present multiplier, or push their luck for a greater payment.

Gameplay Mechanics and Difficulty Levels

One of the defining functions of the Towers game is its personalized risk profile. Before starting a round, gamers normally choose a trouble mode. This dictates the grid size (number of columns per row) and the ratio of safe tiles to surprise hazards.

Difficulty Mode	Grid Layout (Cols x Rows)	Safe Tiles per Row	Danger Level	Max Potential Multiplier
Easy	4 x 9	3	Low	Moderate
Medium	3 x 9	2	Safe/ 1 Trap	Medium
Difficult	2 x 9	1	Safe/ 1 Trap	High
Really High	1	Safe/ 1 Trap	High	Really High
Specialist	3 x 9 (Multiple Traps)	1	Safe/ 2 Traps	Severe
				Huge

The versatility of these modes enables both conservative players-- those who choose stable, incremental gains-- and high-risk thrill-seekers to find a playstyle that matches them.
