## What is the Limbo Crypto Game?

Limbo is a crash-style casino game, though it differs a little from standard crash video games where a multiplier line rises continuously until it crashes. Rather, Limbo is a target-multiplier game.

When a gamer opens a Limbo game, they configure 2 main criteria:

1. **The Bet Amount:** How much cryptocurrency they wish to wager on the round.
2. **The Target Multiplier:** The payment multiplier they wish to accomplish (e.g., 2x, 10x, 100x, and even up to 1,000,000 x).

Once these are set, the gamer starts the round. The game creates a random number. If the produced number is **greater than or equivalent to** the target multiplier, the gamer wins their bet increased by that target. If the produced number fails, the bet is lost.

Before a bet is placed, the gambling limbo casino game online establishment creates a hashed version of the winning result. After the round concludes, gamers can verify the math to ensure the gambling establishment did not control the outcome.
