When playing Limbo, the user chooses a target multiplier (e.g., 2x, 50x, or perhaps 1,000 x) and positions a bet using cryptocurrency. The game then produces a random multiplier outcome. If the produced result is **equal to or higher** than the target multiplier, the gamer wins. If it falls below, the bet is lost.

Why is Limbo So Popular?

- **Lightning-Fast Rounds:** Each game takes only a few seconds, making it perfect for hectic home entertainment.
- **Enormous Multipliers:** Players can frequently target multipliers up to 1,000,000 x, depending upon the platform.
- **Provable Fairness:** Most crypto gambling establishments use cryptographic algorithms that permit gamers to confirm the fairness of every single game round.

Comprehending the Math: Target Multiplier vs. Win Chance

One of the most essential elements of the Limbo crypto game [limbo casino](#) is the relationship in between the target multiplier and the actual opportunity of winning. Because the game consists of an integrated home edge (typically around 1% to 2%), the win possibility is a little lower than pure likelihood suggests.

The following table illustrates how target multipliers associate with win percentages and prospective payments on a theoretical £ 10 bet (assuming a 1% house edge).

Table: Limbo Multipliers, Win Chances, and Payouts (£ 10 Bet Example)

Target Multiplier	Mathematical Probability	Real Win Chance (with House Edge)	Payout on a £ 10 Bet	Net Profit
1.05 x	95.23%	94.28%	£ 10.50	£ 0.50
2.00 x	50.00%	49.50%	£ 20.00	£ 10.00
5.00 x	20.00%	19.80%	£ 50.00	£ 40.00
10.00 x	10.00%	9.90%	£ 100.00	£ 90.00
50.00 x	2.00%	1.98%	£ 500.00	£ 490.00
100.00 x	1.00%	0.99%	£ 1,000.00	£ 990.00
1,000.00 x	0.10%	0.099%	£ 10,000.00	£ 9,990.00

As seen in the table, lower multipliers offer regular little wins, while higher multipliers use rare, life-changing payouts.
