If the produced multiplier is equivalent to or greater than the target, the bet wins. If it falls below the target, the bet is lost. Since gamers have complete control over the target multiplier, Limbo offers an amazing range of volatility, with payouts extending from a modest 1.01 x all the method up to 1,000,000 x or more on specific platforms.

4. **Compute Win Chance:** The game interface immediately determines the analytical probability (win opportunity) of hitting that multiplier based on your home edge.
5. **Roll/Spin:** Hit the bet button. The system produces a random multiplier.
6. **Gather Payout:** If the result satisfies or exceeds the target, profits are immediately credited to the crypto balance.

Feature Description **Minimum Bet** Normally portions of a cent equivalent in crypto (e.g., £ 0.01) **Maximum Multiplier** Frequently topped in between 1,000 x and 1,000,000 x depending upon the platform **House Edge** Generally ranges from 1% to 2% **Speed** Incredibly quick; rounds resolve in under two seconds

The Power of Provably Fair Gaming

One of the primary factors Limbo has gotten massive traction in the crypto community is the integration of **Provably Fair** innovation.

Unlike conventional online gambling establishments where the Random Number Generator (RNG) is kept behind closed doors, crypto-native games use cryptographic algorithms. This allows gamers to independently verify the fairness of each and every single bet.

How Provably Fair Works in Limbo:

- **Server Seed:** Generated by the casino and hashed before the bet is put.
- **Client Seed:** Provided by the gamer's browser (or personalized by the gamer).
- **Nonce:** A number that increments with every bet put.

After a round concludes, gamers can use verification tools provided by the casino to input these variables and prove that your home did not manipulate the result. This openness is a cornerstone of real cash crypto gaming.
