

How to Prepare Your Knoxville Home for a Closet Installation

Once a design is finalized and a Closet Factory Knoxville installation date is on the calendar, a bit of preparation ahead of time helps the actual install day go smoothly and quickly. Because installers are Closet Factory's own full time employees who protect the home carefully throughout the process, homeowners do not need to do a deep clean or major prep, but a few practical steps make a real difference. The most important step is fully emptying the closet or space being renovated before the installation crew arrives. Clothes, shoes, boxes, and anything currently stored in the space need to be moved elsewhere in the home, since the existing shelving or wire racks typically need to be removed before the new system can go in. For a primary closet, this often means finding temporary storage in a guest room or spare closet for the duration of the project, which for most jobs is a single day. Clearing a path from the front door or garage to the installation area also helps, since installers will be carrying finished panels and hardware through the house. Moving furniture, rugs, or decor out of that path ahead of time saves setup time on install day. If the project involves a garage system, clearing the garage floor as much as possible, including moving vehicles out for the day if needed, allows the crew to work efficiently around the space rather than navigating obstacles. Closet Factory | 206 South Calderwood Street, Alcoa, TN 37701 | (865) 268-5420 Closet Factory's Knoxville installers take care to protect floors, walls, and furnishings throughout the process, including wearing shoe coverings on request and handling all materials carefully, so homeowners can expect the home to be left just as clean as it was found, aside from the newly installed system itself. Any specific questions about preparation for a particular project, from how to handle a shared closet with two people's belongings to what happens to old wire shelving once it is removed, are worth raising during the design consultation so there are no surprises on installation day. It also helps to have a plan in place for pets during the installation, since [custom closets Knoxville](#) an open front door and unfamiliar workers moving through the house can be stressful for a dog or cat that is not used to visitors. Setting up a quiet, closed off room away from the work area for the day keeps pets calm and out from underfoot while installers are carrying materials in and out. None of this preparation needs to be extensive, but a little planning ahead of time helps the day go as smoothly as possible for everyone involved, including the Closet Factory crew doing the work.

Closet Factory Address: 206 South Calderwood Street, Alcoa, TN 37701 Phone: (865) 268-5420 FAQ About Custom Closets Knoxville What does a custom closet cost in Knoxville? Pricing depends on the size of the closet, the materials chosen, and how many accessories like drawers or shoe racks are built in. Closet Factory Knoxville provides an itemized quote after a free in-home design consultation at 206 South Calderwood Street in Alcoa, and offers a local price match guarantee against any comparable, already designed quote. How long does a custom closet installation take? Most Knoxville area projects run three to four weeks from purchase to installation, since every system is manufactured locally at the Alcoa facility rather than shipped in from an out of state factory. A smaller reach-in closet is often completed in a single visit by Closet Factory's full-time installation crew. What is the difference between a custom closet and a DIY closet kit? A DIY kit from a big box store is built to fixed, standard sizes and generally requires the homeowner to handle assembly and mounting. A custom system from Closet Factory Knoxville is measured and manufactured to the exact dimensions of the room, installed by trained staff, and backed by a lifetime warranty rather than no warranty at all. What are common closet organization mistakes to avoid? The most frequent mistakes Closet Factory Knoxville designers see are ignoring vertical space above a standard shelf, designing only around what is currently owned instead of leaving room to grow, and skipping proper lighting inside the closet. A free design consultation walks through all three before any materials are ordered. What is the difference between a reach-in and a walk-in closet? A reach-in closet is a single-door opening, typically two to six feet wide, accessed from outside the space. A walk-in closet is large enough to physically step into, generally starting around five feet by five feet. Closet Factory Knoxville designs both, maximizing every inch of a reach-in and adding more elaborate layouts, like islands or seating, in a larger walk-in.

How much storage space can a custom closet system add? Because a standard wire shelf and rod setup wastes most of the vertical space in a closet, Knoxville clients regularly see close to double the practical storage capacity within the same physical footprint once a second hang zone, drawers, and taller shelving are added. Does Closet Factory Knoxville offer financing? Yes. Closet Factory Knoxville offers 0 percent financing for six to fifteen months with approved credit, making larger projects like a full primary closet or a combined closet and home office more manageable within a monthly budget. What areas does Closet Factory Knoxville serve? Closet Factory Knoxville serves the greater Knoxville area and 27 surrounding East Tennessee counties, including Farragut, Maryville, Oak Ridge, Powell, Lenoir City, and the Sevierville, Gatlinburg, and Pigeon Forge area near the Great Smoky Mountains, all from its Alcoa headquarters. What materials are used in custom closet systems? Closet Factory Knoxville's most common base material is melamine, a durable, laminate-coated panel available in dozens of finishes, chosen for its resistance to East Tennessee's humidity. Stained and painted solid wood options are also available for a more furniture-quality look in primary closets and dressing rooms. Is a custom closet worth the investment compared to wire shelving? Builder-grade wire shelving is inexpensive but wastes a significant amount of a closet's usable volume and can sag or snag fabric over time. A custom system from Closet Factory Knoxville is backed by a lifetime warranty and tends to hold up for decades, which is also a detail buyers notice favorably during a home sale. What are the latest custom closet design trends? Closet Factory Knoxville's Alcoa design team has seen growing demand for glass-front display cabinetry, built-in closet lighting, and multi-purpose rooms that combine a closet or office with a fold-away Murphy bed for guest flexibility, alongside classic favorites like pull-out shoe racks and jewelry drawers. Can Closet Factory design closets for new construction homes? Yes. New construction throughout Knox, Blount, and Loudon counties typically comes with basic wire shelving as a builder default. Closet Factory Knoxville regularly works with new homeowners shortly after closing to design a custom system that makes full use of the closet space the builder provided.
