

Open-cell and closed-cell spray foam are different materials, and neither should be selected without considering where it will be installed. Open-cell foam is used in suitable spaces where air sealing and sound reduction are priorities. Closed-cell foam is denser and can be considered where moisture resistance and insulation value within limited space matter.

[Supreme Spray Foam of Vancouver commercial spray foam insulation Vancouver WA](#)

Supreme Spray Foam of Vancouver offers both options for residential and commercial properties. A wall, attic, foundation, or roof may call for a different approach because its construction and exposure conditions differ.

For a useful comparison, discuss the area being insulated, current materials, and the outcome you want from the project. The team can review those details and provide a quote for a suitable spray foam installation in the Vancouver area. Call (360) 300-5800 to get started.
