Understanding the Mathematics and Probability

Initially look, Rock Paper Scissors is a game of pure bitz.io opportunity. With three choices, each alternative in theory has a **33.33%** chance of winning, losing, or tying in any offered round.

If played by pure, unadulterated random number generators (RNG), RPS is a zero-sum game where no strategy can secure a long-lasting profit. However, human beings do not act like random number generators. Since people play RPS, the game shifts from pure mathematics to **behavioral economics and game theory**.

The Nash Equilibrium

In game theory, the optimal technique for RPS is the **Nash Equilibrium**: randomize choices perfectly and evenly (33.3% Rock, 33.3% Paper, 33.3% Scissors). If both gamers do this, neither can get an advantage over the long term.

Yet, humans are notoriously bad at real randomization. We exhibit predictable patterns, cognitive biases, and emotional responses under pressure-- particularly when money is on the line.
