What Are CS: GO Cases?

CS: GO cases are virtual containers dropped randomly to players throughout gameplay or gotten through the Steam Community Market and third-party trading websites. To open a case, a player needs to acquire a particular product: a **Key** (typically priced at around £ 2.50 GBP in-game).

Upon opening, the case spins through a visual live roulette wheel of numerous weapon skins, eventually landing on one item that is included straight to the player's stock.

How Cases Are Acquired

Players generally get cases through 3 main methods:

1. **Weekly Drops:** Active gamers who level up their profile rank when a week are rewarded with a randomized item drop, which often consists of a case from the current active drop pool.
2. **The Steam Community Market:** Players searching for particular older or stopped cases can buy them straight from other players.
3. **Third-Party Trading Platforms:** Trusted external websites permit players to buy, offer, or trade cases using real-world currency or crypto.

The Mathematics of Opening: Odds and Rarities

It is crucial to understand that opening CS: GO cases is a kind of gaming. Valve transparently publishes the rarity tiers and drop rates for cases in areas where policies need it.

Every weapon skin inside a case falls under a rigorous hierarchy of rarity. The table listed below lays out the standard drop rates for a common CS: GO case:

Rarity Tier	Product Type	Approximate Drop Rate	Customer Grade	N/A (Standard skins)	0% (Found through post-match drops just)

- **The Investment Market:** Many gamers deal with cases as financial properties. Holding onto discontinued cases for several years has yielded returns that periodically surpass conventional stock markets-- though volatility is very high.
- **Trade-Up Contracts:** To combat lower-tier mess, gamers can use Trade-Up Contracts, sacrificing 10 weapons of one tier to receive 1 weapon of the next higher tier, heavily affecting the marketplace worth of "Classified" and "Restricted" skins.
