Mechanic	Description	Strategic Value/ Pro-Tip
Pathing/ Mazing	Requiring opponents to walk a longer route using positioned towers. Takes full advantage of the "time-under-fire" for your damage dealerships. Produce serpentine paths rather than straight lines.	
Targeting Priorities	Setting towers to target the <i>First, Last, Strongest, or Weakest</i> enemy. Prevents overkill on weak minions and ensures heavy-hitters are focused down early.	
Resource Economy	Getting currency (gold/energy) by means of eliminates, interest, or dedicated farms. Balance financial investment: spending too much on defense starves you of development; hoarding gold leads to being overwhelmed.	
Elemental Weaknesses	Matching specific damage types (Fire, Ice, Lightning) to enemy armor types. Ice slows quick units; Fire deals damage-over-time to high-health targets. Make use of these multipliers.
