3. The website credits the player's account with a comparable virtual balance based on the marketplace worth of the transferred skins.
4. The player uses this balance to put bets on a digital roulette wheel.

If they win, they can withdraw higher-value skins. If they lose, their deposited skins are gone.

- **Neighborhood and Streaming Culture:** Content developers and streamers regularly display CS Roulette on platforms like Twitch and YouTube, developing an amazing, high-stakes atmosphere that attracts viewers.
- **Pleasure principle:** Rounds are rapid, frequently lasting less than 30 seconds from the placement of bets to the spin of the wheel.

- **Financial Loss:** Just like real-world gambling, your house constantly has an edge. Numerous players deposit important digital assets only to lose them within minutes.
- **Lack of Regulation:** Most third-party CS betting websites run offshore, unregulated by standard video gaming authorities. This implies users have little to no legal option if a website refuses to pay out or suddenly shuts down.
- **Scam Sites and Phishing:** The market is swarming with deceitful platforms created to simulate genuine sites. Unsuspecting users typically lose their whole Steam inventories by logging into harmful phishing links.
