Comprehending Knife Opening in CS: GO

In CS: GO, knife products are not offered directly by Valve. Rather, they are obtained through the **case opening system**. Players acquire a weapon case (or receive one as a drop) and utilize a **Key** to open it. The result is determined by a random number generator (RNG) that designates a rarity tier to each item. Knives belong to the **Covert** (blue) tier or the **Classified** (pink) tier, with the rarest "★ Special Item" (gold) representing the desired *Rare Special Item* (RSI) that in some cases appears rather of a traditional weapon.

Due to the fact that knives are simply cosmetic, they have no effect on gameplay performance. Their worth is driven completely by aesthetic appeals, rarity, and market need.

How the Case Opening System Works

When a gamer clicks "Open Case," the client performs the following steps:

- 1. Random Selection:** The RNG chooses a "grade" (e.g., Consumer, Industrial, Mil-Spec, Restricted, Classified, Covert, or Rare Special Item).
- 2. Item Allocation:** Within that grade, the system chooses a specific weapon or skin.
- 3. StatTrak™ Roll:** If the chosen skin is eligible, a second roll decides whether it becomes a **StatTrak™** variation (tracks kills) or a standard skin.
- 4. Keepsake Flag:** In particular tournament-locked cases, a further check might mark the item as **Souvenir** (initially from a pro-match).

The entire procedure is server-side and can not be manipulated by the client, guaranteeing fairness but likewise verifying that each opening is independent of previous results.
